Architecture Program

To create safe, secure, comfortable, and sustainable architecture and cities, you will acquire knowledge in mathematics, natural science, and information technology that form the basis of architecture. You will learn physical basics, CAD, and simulation technology necessary for architectural innovation. This is in addition to a wide variety of advanced education and research with a focus on architectural environments, architectural planning, urban planning, building structure, architectural materials, and building construction with an integration of academics, technology, and art.
