

DX Human Resource Development Foundation Program

This program is designed to cultivate human resources with the fundamental skills required for digital transformation (DX) to create new value in business and society. You will learn the latest technology and its applications related to programming and software development techniques that form the basis of ICT. This includes computer theories and design capacities; support for the information society such as the Internet and security; and multimedia and knowledge processing to effectively use big data. You are expected to become future leaders who can support the digital society with technology, including identifying and resolving potential problems and promptly recovering and reconstructing digital infrastructure during emergencies.
