

Division of Natural Sciences

You will comprehensively learn a wide range of natural sciences theories including biological science, material science, geoscience, and scientific technology that contributes to the development of the local community. In the curriculum, lectures on each basic field of physics, chemistry, biology, and geoscience are prepared as required subjects. Based on these subjects, studies on quantum theory, molecular structure analysis, environmental biology, and space science will deepen your knowledge. Your "practical skills" will be cultivated with a fusion subjects in each field and subjects from which to share your expertise with society.
